student@student-laptop:~/simplescalar/simplesim-3.0$

```

### 3) Running test-pisa programs

	sim_num_insn	sim_cycle	sim_IPC	sim_CPI
test-fmath	52387	98854	0.5299	1.8870
test-llong	27807	54623	0.5091	1.9644
test-lswlr	8734	17867	0.4888	2.0457
test-math	213487	386448	0.5524	1.8102
test-printf	1729323	3167231	0.5460	1.8315

#### 4) Performance comparison

Conf	FP resources	Fetch speed	Fetch ifqsize	Lsq size	Ruu size	Issue width	Commit width	In order	test-fmath	test-llong	test-lswlr	test-math	test-printf
1	1	1	1	2	2	1	1	Y	1.8870	1.9644	2.0457	1.8102	1.8315
2	1	1	1	2	4	1	1	N	1.5298	1.6085	1.8074	1.4353	1.4485
3	4	1	1	2	4	1	1	N	1.5298	1.6085	1.8074	1.4353	1.4485
4	4	1	1	2	8	1	1	N	1.5169	1.5938	1.8063	1.4227	1.4373
5	1	4	4	4	8	4	4	N	1.1437	1.1923	1.1895	1.0990	1.1231
6	4	4	4	4	16	4	4	N	1.1244	1.1787	1.1861	1.0739	1.1140
7	4	8	8	8	64	4	4	N	1.0851	1.0568	1.1595	1.0551	1.0291

From 1 to 2, only ruu-size is changed: the result is a speedup of all tests because probably the register update unit was the bottleneck.

From 2 to 3 there is no improvement adding more FP resources. These units (fpalu and fpmult) in this configuration are not overloaded.

The biggest improvement is from 4 to 5, where the fetch-speed, fetch-ifqsize, lsq-size, issue-width, commit-width are enhanced.
